

Successful application requirements

- The defibrillator must be freely accessible to the public 24/7 and be placed externally.
- There must be a clear need for the device (e.g. a location with high footfall or in a rural area)
- There must be a commitment to train the local community to use the Call Push Rescue training kit provided.

Groups which can't apply

Unfortunately, we're unable to provide funding to the following groups:

- GP surgeries
- Dental practices
- Schools and colleges
- Military organisations
- Police
- Private or commercial companies
- Community First Responders (unless they are applying for a public access defibrillator in their local community).

You can only apply for funding for one defibrillator per organisation, and the applications can only apply to new PADs, not replacement ones.

What you will receive

When your application is accepted, you'll receive a PAD. The models available are the iPAD SP1 and the ZOLL AED Plus (pictured below). We do not provide cabinets to store the defibrillator. Please see our full statement on cabinets in our [Guide to defibrillators](#).

We'll also provide you with our [Call Push Rescue training kit](#). This contains equipment to train up to 10 people at a time in life saving CPR skills. Training is delivered by watching our educational film and sessions take around 30 minutes.

The

Call Push Rescue kits

You can arrange simple CPR training sessions using our innovative [Call Push Rescue kits](#).

The CPR training kit trains 10 people at a time and is reusable. No instructor is needed as all of the techniques are taught using the DVD included in the pack. All you need is a DVD player and a little space to practise in. Community groups can purchase these for **£391** plus VAT. Included in our application.

CPR training kits

We're determined to increase cardiac arrest survival rates by creating [anation of life savers](#).

Our Call Push Rescue training kit provides all the specialist equipment needed to teach CPR.

The Call Push Rescue training kit will teach trainees how to recognise [cardiac arrest](#) and carry out CPR on adults and children.

It uses a film tutorial on a DVD to demonstrate CPR skills. Participants watch the film and practice the skills on portable manikins.

It also shows how public access defibrillators work and their role in the life saving process, so trainees are aware of their importance and are more confident to use one, if needed.

The CPR training kit covers

1. How and when to perform CPR on an adult or child
2. How to put someone in the recovery position
3. How to use a public access defibrillator

Using your CPR kit

All you need to run a CPR training session is:

- a device on which to play the training films
- a screen and speakers so trainees can
- clearly see and hear the instructions
- enough space for each participant to kneel on the floor with a manikin in front of them.
